protect business-essential assets in an uncertain world

You worked hard to create a flexible, cost-effective infrastructure that meets the specific demands of your business. Now your organization depends on it, day in and day out, no matter what the circumstances. Getting cut off from this vital resource, whether it's because of an operational problem, such as a power outage or a small-scale disaster, can have full-scale consequences if you're not adequately prepared. In fact, for some companies, even scheduled downtime is unacceptable. The price of inaccessibility, in terms of lost revenue, profitability, and a damaged reputation, is much too high. Arranging the recovery window that best meets your needs and budget—whatever your business can tolerate—is the best plan for getting through any unplanned event.

the right technology, people, and approach

HP has the expertise and the services to preserve the continuity of your IT-supported business processes against all types of outages. Our award-winning technology in high-availability and disaster-tolerant computing is engineered to provide maximum uptime and minimal data loss. Our wide range of services, including a full outsourcing option, help you harness this technology to your business needs. We'll work closely with you, in a collaborative, flexible fashion to build a continuity solution that meets your recovery-time and recovery-point objectives. And we'll focus on a solution that helps your business achieve the right balance between cost and redundancy.
