hp Microsoft Exchange 2000 on demand—
expert, cost-effective messaging management

your messaging solution shouldn’t strain your IT resources

Mail and messaging services are critical to keeping your business running smoothly—and that’s why you chose Microsoft® Exchange as your enterprise messaging platform. You’ve probably considered moving to Exchange 2000, but with shrinking IT budgets and staff shortages, it’s hard to justify the resources required for a major migration effort. If you could outsource your messaging solution to a trusted expert, and realize significant cost savings in the process, you wouldn’t have to sacrifice. And with minimal disruption, your users could gain access to the most up-to-date messaging features to improve their productivity.

hp makes messaging more efficient and predictable

HP has an innovative outsourcing solution that simplifies migrating to, managing, and supporting Exchange 2000, without limiting solution flexibility or availability. HP Microsoft Exchange 2000 on Demand provides service wherever and whenever you need it, at a predictable price-per-user-mailbox. This completely packaged solution aggregates all the products and services you need to migrate to Exchange 2000 and then enables all employees, regardless of location, to access a secure, available internal mail and messaging system on an on-going basis. With this On Demand solution, you pay for messaging resources based on your usage—which makes perfect sense for today’s business.
hp Microsoft Exchange 2000 on demand—helping optimize your environment

the outstanding flexibility of managed services

HP Microsoft Exchange 2000 on Demand is a packaged solution that includes everything you need, on a price-per-user-mailbox basis

- datacenter infrastructure for your messaging system
- HP Proliant servers and HP StorageWorks SAN solutions
- installation, setup, and on going management and support for the Exchange 2000 environment

HP Microsoft Exchange 2000 on Demand is designed to maximize flexibility. You can increase the number of mailboxes as your end-user base grows, or even decrease them down to a contractually determined level. You pay for what you use, beyond your contractual minimum, and HP takes care of the changes. You can house the equipment at your datacenter, at HP, or with your service provider—HP provides remote management wherever it’s located.

HP Microsoft Exchange 2000 on Demand can be integrated and installed with minimal disruption, regardless of access device, including desktops, laptops, and handhelds. Once the Exchange on Demand solution is installed, HP provides on-going monitoring, managing, and reporting. An HP program manager works with your staff to create a smooth transition to the managed services environment, and helps evolve your solution as business needs change.

Today’s market calls for creative ways to support your business needs, and HP is committed to developing solutions that adapt easily. Partnering with us can bring your Microsoft Exchange 2002 environment to new levels of simplicity, agility, and efficiency.
